🚀 Starting Tomorrow! From Curiosity to Capability: Copilot Zero to Hero

We've launched something special - a bite-sized, impactful series designed to turn everyday users into confident copilots.

💡 Whether you're just getting started or looking to master your workflow, Copilot Zero to Hero is your guided path through Microsoft Copilot - covering tips, real-world use cases, and the 'aha!' moments that change how you work.

📅 Sessions run every 2 weeks — join live or catch the recordings.

🔗 Register now: <https://lnkd.in/dxjzYbp2>

The Agenda...

1. Background & Context

A quick look at why SharePoint organisation matters for Copilot, framed through real-world challenges and opportunities.

Introducing the “ANALOGY”.

2. Information Architecture

Exploring site structures, taxonomies, and content types — the building blocks for relevant and compliant Copilot insights.

3. Live *{Rehearsed}* Demo

Practical walkthrough showing how governance in SharePoint directly impacts Copilot’s ability to deliver value.

4. Q&A

An open space for discussion, clarifying concepts, and sharing audience insights.

Background & Context

Information Architecture

Why Information Architecture for Copilot?

Because... Copilot

Copilot relies on Microsoft Graph + indexed SharePoint content to answer questions

Good IA improves relevance

Authoritative, up-to-date sources surface first

Security-trimmed access

Copilot shows only what the user already may access

Compliance guardrails

Retention, sensitivity, and DLP reduce risk

Outcome

Faster, trusted answers for staff; lower regulatory exposure for the org

Modern Site Structure

Go flat, connect with hubs, and design for compliance-by-container

01 Split 'em

Create separate sites for discrete topics/teams/projects (no subsites)

02 For the LOVE of Hub Sites

Use Hub Sites to unify navigation, search scope, and branding

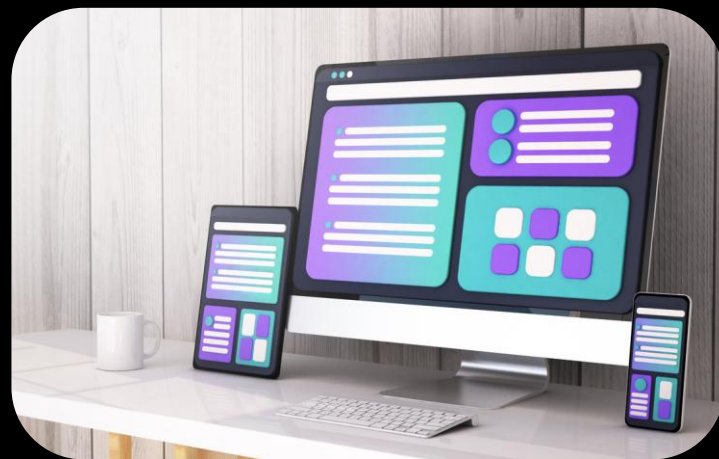

03 Naming Matters...

Name sites clearly (e.g., 'HR Policies', 'Project Phoenix') for discoverability

OOTB Site Templates < 😊 or 😞? >

Configure first; customise only when necessary

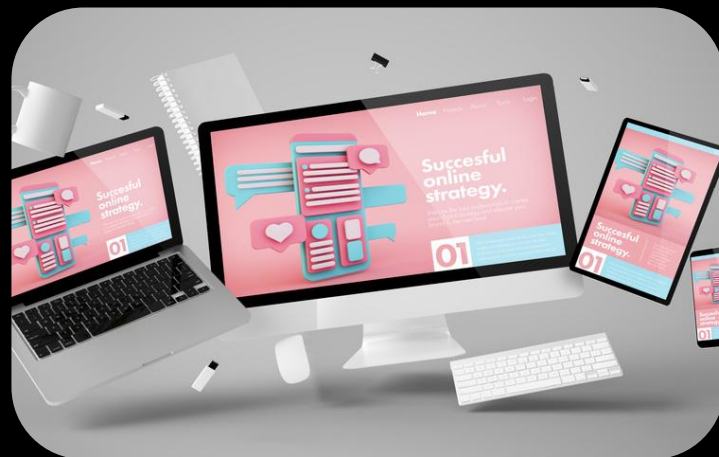

Not The Worst, Honestly

Microsoft-supported, continuously updated, and Copilot-ready.

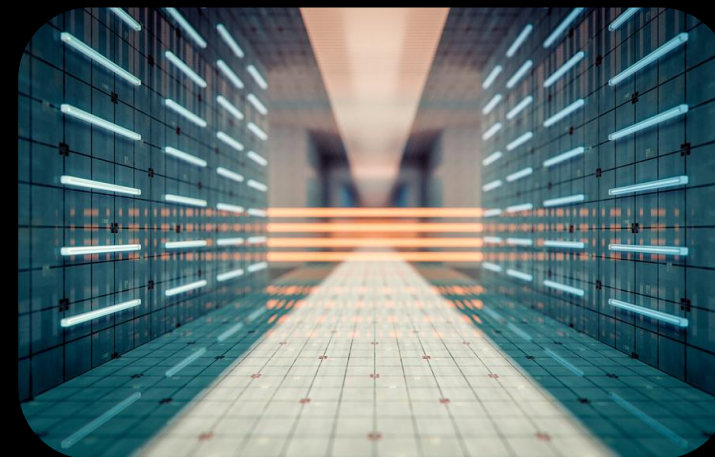

NO <Okay Maybe a Lil> Code

Avoid heavy custom code unless essential - this reduces breakage risk and cost.

Do the things - CONFIG

Focus on configuration (navigation, columns, labels) before custom dev.

Tailor with Governance

Site owners, hub associations, container sensitivity labels.

Taxonomy & Managed Metadata

A tenant-wide controlled vocabulary to classify content

1. Key Data Points

Start with key facets – e.g.,
Department, Document Type, Region,
Project, Customer

2. Structure

Model hierarchies (e.g., 'EMEA > South Africa
> Gauteng') to mirror the business

3. Responsibility

Assign business owners for term
sets; manage synonyms; clean up
duplicates

4. Additional Info

Add managed metadata columns
to libraries/content types for
consistent tagging

Taxonomy for Governance

Standardise!

Standardised tags streamline search, reporting, and policy scoping

Train the People!

Default metadata where possible to reduce friction

Use the Terms!

Use terms to drive auto-apply retention labels (via Purview) where appropriate

Review Regularly!

Merge terms, retire unused, keep vocabulary current

Content Types & Content Type Hub

Enforce structure and reuse metadata at scale

1. Metadata

Define required metadata and templates per document type (e.g., Contract, Policy)

2. Quality

Improve data quality and downstream automation (alerts, workflows)

3. Search Refinement

Enable search refinement and clear content separation

4. Retention Labels

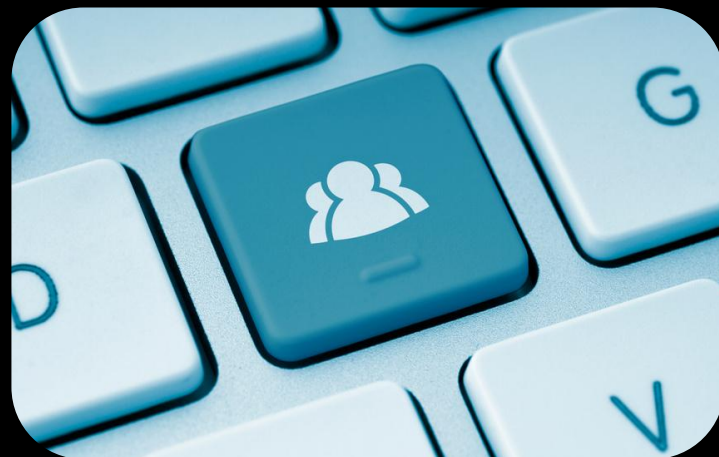

Support auto-apply retention labels by type for compliance-by-design

Enterprise Publishing via Content Type Hub

Enterprise-Ready

Create enterprise content types in the central gallery (hub)

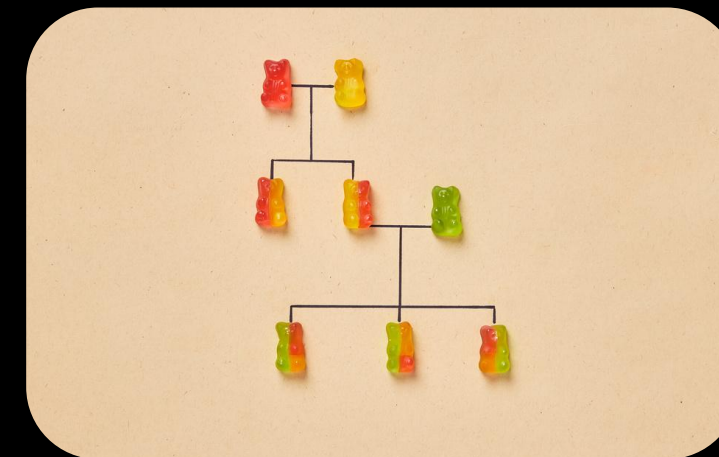

Guide the Users

Set default CTs per library to guide users at creation time

Consistency

Publish to all sites for consistency; restrict who can create/modify CTs

Inheritance

Use inheritance for families of CTs (e.g., 'Official Record' base + specialised children)

Permissions & Access Governance

Design for least privilege and review regularly

1. Access Management

Manage access via M365/Azure AD groups; avoid item-level unique permissions

2. Sensitive Data

Keep sensitive content in private sites; avoid 'Everyone except external' on libraries

3. Review Access

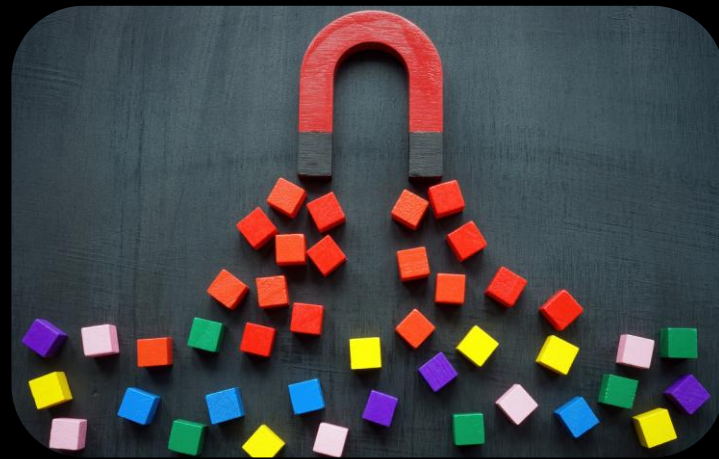

Schedule access reviews for site membership and guest links

4. Sensitivity Labels

Use container sensitivity labels to govern sharing and device access

Retention, Labels, and DLP

Retention Labels

Apply retention labels/policies for timely disposal or archiving

Sensitivity Labels

Use sensitivity labels for encryption and usage controls on files/sites

Data Loss Prevention

Configure DLP to detect and block sharing of sensitive info (e.g., ID numbers)

Archiving Strategy

Archive inactive sites/libraries; keep active workspaces lean and current

Compliance Alignment

POPIA • GDPR • ISO/IEC AI Standards

1. POPIA/GDPR

Data minimisation, purpose limitation, storage limitation → retention & structured CTs

2. Integrity/Confidentiality

Least-privilege permissions, sensitivity labels, auditing

3. Accountability

Taxonomy/CT ownership, access reviews, activity logs

4. ISO/IEC AI

AI management & risk governance on all sources and quality of AI inputs (SharePoint)

TL;DR

Good Info Architecture

Good IA is the foundation for relevant, trustworthy Copilot answers

Governance

Permissions, retention, sensitivity, and DLP are your guardrails

Flat Site Structure & Hubs

Flat site architecture + hubs = simpler governance and discoverability

OOTB Config

Favour OOTB configuration for speed, supportability, and Copilot readiness

Taxonomy & Content Types

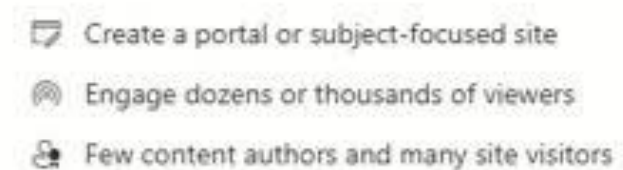

Taxonomy and content types enable consistency and compliance-by-design

Announcement	Last Updated
Update: Microsoft 365 and Microsoft Teams: Unified management of Teams apps in Teams, Outlook, and the Microsoft 365 app Microsoft is unifying app and agent availability management across Teams, Outlook, and Microsoft 365 admin centers to ensure consistent settings. The rollout begins late September 2025 in three phases, synchronizing policies and providing tools to resolve discrepancies. No immediate action is required, but reviewing current settings is recommended. September 8, 2025	September 8, 2025
(Updated) Additional document processing rule actions for Microsoft SharePoint libraries Microsoft SharePoint libraries will gain new document processing rule actions—copy file to, move file to, and set content type—rolling out from late August to mid-September 2025. These enable automated file management based on metadata for users with edit permissions. Users should prepare by informing teams and reviewing existing rules. September 8, 2025	September 8, 2025
(Updated) Microsoft Outlook for iOS/Android: Improved Contacts with profile enrichment and duplicate management Microsoft Outlook Mobile (iOS/Android) will roll out unified, profile-enriched contacts with automatic duplicate management from mid-July to early October 2025. This improves contact views with organizational info, hides duplicates, requires no admin action, and users should update to the latest app version. September 5, 2025	September 5, 2025
